COLOUR CHART

2027 COLLECTION

PEARL / MIRRORED

ETCHED / SHINY

One palette, different surfaces

Photographed from our original studio samples, the paired circles show each glass colour in pearl, mirrored, etched and shiny finishes, as a guide to the colour and character of each option.

How glass colour is made

Unlike paint, glass is not tinted with pigment. Its colour comes from metals and mineral elements melted into the glass at high temperature: cobalt gives deep blues, copper gives turquoise and green, gold gives rich rubies and pinks, and manganese gives violet. Each colour is a chemical reaction, so glass can't be mixed or blended to order, or matched exactly to Pantone or paint references. Because every piece is blown by hand, slight variations in tone and density are part of its character, giving each work its individuality and life.

Select for the design

Colour and finish availability depend on the form. Please confirm your selected combination with the studio. If a finish isn't pictured, it may still be available, so please ask.

Approve a physical sample

Glass is a living material, and its colour changes with its surroundings. Thickness, light and surface finish all affect how saturated or transparent a piece appears. The colours shown here, on screen or in print, are a guide and can't fully capture the depth of the glass itself. Where colour is critical to a project, we recommend requesting a physical sample.

Opal colours are opaque and don't let light through. Some are not available in pearl or mirrored finishes.

Stone textures

Translucent glass with a mineral-like surface

Black

Illustrative texture

White

Original studio sample

Alabaster

Original studio sample

Texture, softened by light.

These surfaces retain the light and translucency of glass, bringing a softer, stone-like character to selected forms. White and Alabaster above are material details from the original studio photographs.

Available on selected designs, including Wall Minerals. Confirm the form, colour and surface with the studio when specifying.
